Statement of the Manufacturer on Product Composition and INCI Declaration

We, matrihealth GmbH, as the manufacturer of the cosmetic-grade hydrolyzed elastin marketed under the trade name matripure® (INCI: Hydrolyzed Elastin), hereby confirm the following regarding product composition and INCI declaration:

1) Product Composition

matripure® consists exclusively of hydrolyzed elastin and naturally occurring residual constituents originating from the animal-derived raw material source (porcine tissue). No additional cosmetic ingredients, preservatives, stabilizers, or other substances are intentionally added during the manufacturing process.

2) Nature of Residual Constituents

The naturally occurring residual constituents may include: residual moisture (water), residual salts, and trace amounts of biological macromolecules naturally occurring with the raw material, such as fatty acids, carbohydrates, and other proteins like collagen. These constituents are present only at very low levels and are inherent to the animal-derived source material and manufacturing process.

3) Compliance with Product Specifications

All residual constituents are controlled within the established product specifications for matripure® and do not alter the identity or functional characterization of the product as hydrolyzed elastin.

4) INCI Declaration

Based on the composition and intended cosmetic function of the product, matripure® is appropriately designated under the single INCI name "Hydrolyzed Elastin".

To the best of our knowledge and according to the applicable cosmetic ingredient declaration principles, no additional INCI-listed substances are required to be declared for matipure®.

Sincerely,

Tobias Hedtke

Managing Director, Chief Technology Officer
